2007 to 2010  
First Class Honours

### Longley Park Sixth Form College

BTEC IT Practitioners  
2005 to 2007  
Triple Award Distinction

## Personal Statment

“ I'm a **front and back end web developer** with broad technical skills looking for an opportunity to work at the heart of the industry in a team of like-minded individuals.

With over 5 years of experience in the trade I'm able to confidently code up web designs to standards compliant, cross browser and responsive HTML5 and CSS3, whilst a good understanding of jQuery and core JavaScript allows me to add additional functionality. As a back end developer I have the ability to build complex interactive sites and applications utilizing PHP, MySQL, Apache, database design, as well as advanced programming patterns and models such as Object Orientated Programming.

I've had an interest in building websites from a young age when I created my first site using FrontPage. Currently I'm a freelance developer. Previously I worked in a team on a variety of projects - ranging from simple brochure to complex recruitment websites.

## Experience

### Freelance Web Developer

*August 2014 to Present*

I've had the opportunity to work on a wide range of projects and advance both my technical and personal skills. Key projects I've worked on are listed below:

- Worked with the team at Autism Plus to develop an e-commerce website using Drupal, Ubercart, and a responsive framework. I also developed a phpBB forum for this client to be used by people with learning difficulties.
- Completed numerous brochure websites to promote various companies, each site was constructed using Drupal as well as responsive frameworks and grids.
- Continued working with my previous employer on a freelance basis further developing and adding new features to their recruitment site.

### Web Developer at ZootAlore! Group

*January 2010 to August 2014*

I worked alongside a small team building and maintaining numerous internal and external client projects. Key responsibilities and projects are listed below:

- Building the front and back end as well as maintaining a recruitment website to take the reliance away from telephone marketing. The site allowed users to create profiles and apply for jobs, while providing useful tools such as a budget calculator and diary. At its core the site utilized the CodeIgniter PHP framework.
- Developing and updating the main company website and other internal sites.
- Consulting with external clients and building websites for them using WordPress.
- I also had the responsibility of being systems administrator. My duties included giving technical support and maintaining the Windows domain server and hosted PCs.
